Resolution Supporting Carbon Free Electricity Across Canada

Whereas there is scientific consensus that we must more than double our clean electricity supply by 2050 to meet Canada’s carbon reduction goals; and

Whereas the U.N. IPCC’s model pathways to prevent catastrophic climate change require significant increases in a diverse energy mix that includes hydro, nuclear energy, wind, solar, and storage; and

Whereas each provincial electricity grid has unique demand requirements and opportunities for a carbon-free supply mix; and

Whereas investing in the decarbonization of electricity grids will create and sustain good, union jobs; and

Whereas the free, prior, and informed consent of Indigenous Peoples should be a necessary condition for new energy projects.

Be it resolved that section 2.4 of the policy book be amended in the following ways:

1. **Add the following subsection:** *Eliminating the use of fossil fuels for electricity generation in Canada.*
2. **Amend subsection 2.4.e by replacing it with:** *“Ensuring the highest global standards for nuclear safety, security and waste management”*
3. **Add the following subsection:** *Supporting the decarbonization of provincial energy grids through investment in new ultra-low emissions electricity projects including hydro, renewables, made-in-Canada nuclear, and storage.*
4. **Add the following subsection:** *Requiring the free, prior, and informed consent of Indigenous Peoples for all new energy projects.*
5. **Add the following subsection:** *Defending and expanding public ownership of electricity generation, transmission, and distribution.*

Motion to amend: add “thorium salt reactors” after “made-in-Canada nuclear”.
carried

Motion to amend: add “wherever possible” to the end of *Eliminating the use of fossil fuels for electricity generation in Canada.* carried

Resolution carried as amended
